# ATTENTION

Before using your new Victorio Food Strainer, please read and follow all instructions. Carefully study the diagrams on the following pages to become familiar with the various parts of your Food Strainer.

## Parts Diagram

Your strainer should come with all the parts shown and listed below:

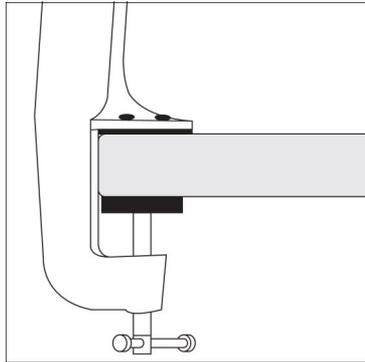

## Parts List:

- |                             |                                   |
|-----------------------------|-----------------------------------|
| (1) VKP250-16 Hopper        | (10) VKP250-14 Spring             |
| (2) VKP250-21 Body          | (11) VKP250-7 Standard Spiral     |
| (3) VKP250-22 Rubber Pad    | (12) VKP250-10 Screen Gasket      |
| (4) VKP250-23 Plastic Cap   | (13) VKP250-8 Screen Screw        |
| (5) VKP250-15 Handle        | (14) VKP250-6 Apple/Tomato Screen |
| (6) VKP250-20 Nylon Bushing | (15) VKP250-19 Waste Spout        |
| (7) VKP250-13 Shaft Seal    | (16) VKP250-17 Food Pusher        |
| (8) VKP250-12 Shaft Clip    | (17) VKP250-18 Squirt Guard       |
| (9) VKP250-11 Shaft         |                                   |

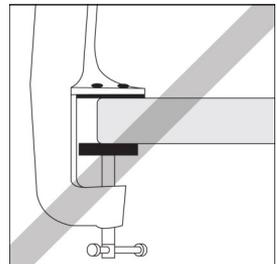

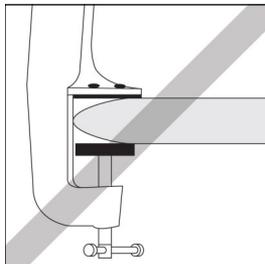

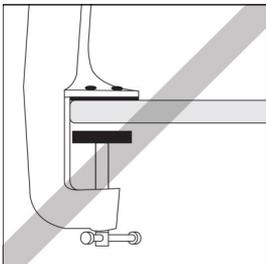

## Operating Precautions

- **WARNING! Never operate the strainer dry. This will damage the screen and spiral.**
- Never use any tool except the food pusher in the hopper.
- Keep hands, hair, clothing and any other objects, except the food pusher, away from the hopper opening, at all times.
- Never operate the food strainer if any parts are missing or damaged.
- Never operate the food strainer without clamping it securely in place.
- Never put hot foods into the food strainer. This could damage, crack or melt any plastic parts.
- Always make sure the food strainer is clamped securely to a sturdy surface before assembling and using. (See diagram below for correct mounting examples).

### Correct

### Incorrect

## Product Overview

Congratulations on your purchase of a Victorio Food Strainer! You will definitely find this to be a useful addition to your kitchen. If you are concerned about how to use your food strainer, don't worry. This manual will give you step by step instructions to guide you through the process.

To give you an idea of the basic procedure, you will start by washing all parts of your strainer, assembling it correctly, preparing the produce you want to strain, filling the hopper halfway with the prepared produce and gently guiding it down into the strainer with the food pusher. The sauce, or pulp, will pour down the squirt guard and begin collecting in a bowl as you continue the straining process. The skins and seeds are easily separated and sent out the waste spout, away from your fresh, homemade sauce. You can quickly make apple or tomato sauce, pumpkin pie filling, jams, jellies, and more. Let the Food Strainer do the work for you.

In this manual you will find care instructions, how to prepare specific types of produce for straining, assembly instructions, instructions on how to use your food strainer, helpful hints and a troubleshooting guide.

## Care Instructions

After using your Strainer, promptly disassemble and hand wash all parts in warm, soapy water. **Do not put the food strainer in a dishwasher.** This can cause discoloration of the body and damage to the other parts as well. Do not leave any of the parts soaking in water for a long period of time. Dry thoroughly after washing. When not in use, store the food strainer in the original carton away from direct sunlight, moisture and extreme temperatures.

**NOTE:** The plastic parts may become stained after straining cooked foods, such as tomatoes, berries, etc. This will not affect the operation of the Food Strainer.

## Preparing Specific Produce Types

While this sections teaches you how to prepare different types of fruits and vegetables, it also introduces optional accessory screens and spirals that do not come standard with the food strainer (see p. 8 for details).

### **APPLE SAUCE**

It is best to use a variety of apple types. Make sure they are ripe and free of blemish. Wash, and remove stems, then cut into quarters. It is not necessary to remove the skin, core or seeds. Simmer or steam until tender – about 15 to 20 minutes. Drain and cool slightly. Process through the **Apple/Tomato Screen**. Season to taste.

### **TOMATO SAUCE AND SALSA**

For best results, use fresh, ripe, uncooked tomatoes. Wash and cut into quarters. Process through the **Apple/Tomato Screen**. To thicken the tomato sauce after straining, you can simmer the pulp in a pot on a stovetop to remove excess moisture. To turn your tomatoes into salsa use the **Salsa Screen**.

### **APRICOTS, PEACHES, PEARS, PRUNES, PLUMS, ETC.**

Wash the fruit and remove any pits. Do not put pits through the strainer. Simmer the fruit until soft. Drain and cool the fruit, then strain through the **Apple/Tomato Screen**. Season to taste.

### **BEANS AND PEAS**

Use any cooked beans or peas for soups, side dishes, bean dips, burritos, tacos, or enchiladas. Strain through the **Pumpkin Screen** and season to taste with onion, garlic, etc.

### **BERRIES**

Use the **Berry Screen** to process berries that have very small seeds. Wash the fruit, remove the stems, and process through the strainer. Berries with larger seeds can be processed with the standard **Apple/Tomato Screen**. Perfect for making jams, jellies, pie fillings, dessert and ice cream toppings, and for dried fruit leather.

### **PUMPKINS AND SQUASH**

Use the **Pumpkin Screen** to process squash and pumpkin. Wash the outside of the pumpkin or squash thoroughly, remove seeds and cut into 1-2 inch cubes. Steam or bake until soft. Cool, then strain. Just right for pies, breads, and side dishes. Freeze in one-cup portions for later use.

## POTATOES

Make mashed potatoes quickly for large groups or families. No need to peel. Just quarter, cook until soft, and then strain through the **Pumpkin Screen** or **Salsa Screen**. Season to taste.

## GRAPES

Remove stems and rinse grapes thoroughly. Use the **Grape Spiral** when straining grapes to keep the strainer from binding or getting too difficult to turn. Strain the grapes using the **Apple/Tomato Screen** for best results. You may want to run the waste through the food strainer a second time to remove the maximum amount of juice.

## CHERRIES

Remove stems, pits and rinse fruit thoroughly. Pits must be removed before straining cherries. Process using the **Apple/Tomato Screen**.

## POMEGRANATES

Remove pomegranate arils from the peel and inner membrane. Only the arils can be processed through the Food Strainer. Use the **Apple/Tomato Screen** or the **Berry Screen** for processing.

## Straining Tips

1. Use the **Grape Spiral** when foods have large seeds or thick peels. This will keep the food strainer from jamming.
2. If you are getting undesirable amounts of seeds or peel in the finished product, switch to a finer screen.
3. If waste contains excess amounts of juice or pulp, it can be processed through the food strainer a second time to extract the maximum amount of juice and pulp.
4. The **Salsa Screen** can be used on any food where an extra coarse texture is desired. Works best on foods that are seedless or when having seeds in the finished product is desired.
5. Visit our website, **www.Victorio.info**, for more tips.

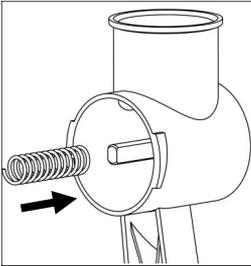

## Assembly Instructions

(Use with parts diagram on p. 1)

View our assembly video on our website at [www.Victorio.info](http://www.Victorio.info).

1. To begin assembly, mount the Food Strainer body (2) to a table or countertop. Do not over-tighten (see diagram on p. 2).

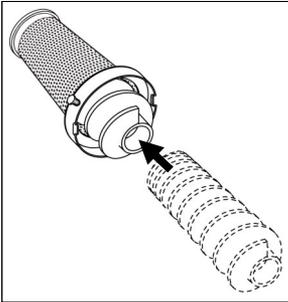

2. Put the spring (10) onto the shaft (9) that is already installed in the strainer body.

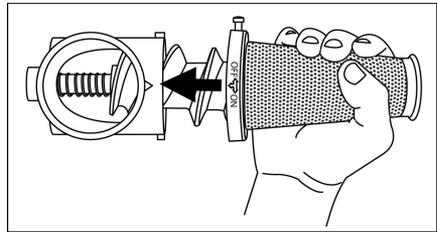

3. Make sure the rubber gasket (12) is seated on the inside rim of the screen (14).

4. Place the small end of the spiral (11) inside of the screen.

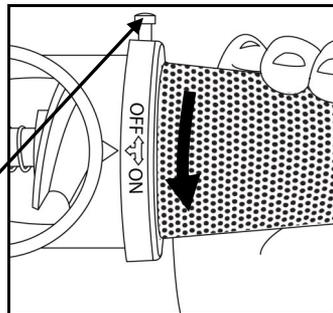

5. Push the spiral/screen assembly onto the body (2).

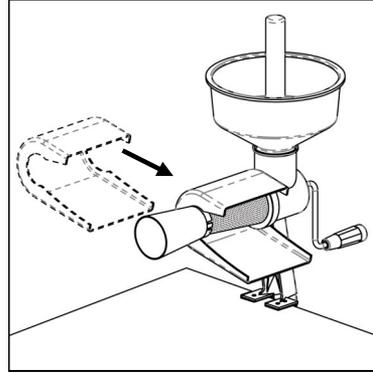

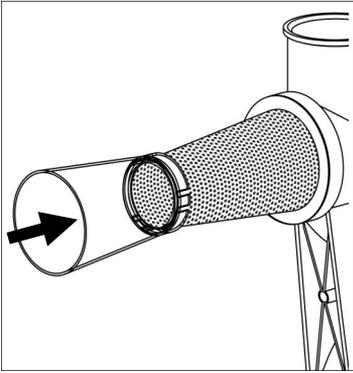

6. Line up the arrow on the screen with the arrow on the body. Twist the screen towards the 'ON' direction until the notches slide over the tabs on the body. Then tighten the screen screw (13) to keep the screen in place.

**Screen screw must be untwisted all the way before you rotate the screen.**

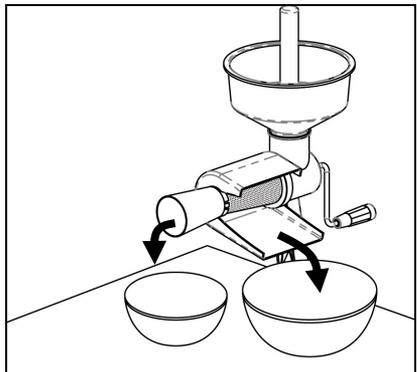

7. Snap the small end of the spout (15) into place on the end of the screen.
8. Slide the squirt guard (17) over the screen from the rear so that it snaps onto the body and the small end of the spout.

9. Place the hopper (1) on top of the strainer body (2) and insert the handle (5) in the end of the drive shaft. Your Food Strainer is now assembled and ready for use.

### **Strainer Use Instructions**

1. To prepare food for straining, wash fruits and vegetables thoroughly and cut into pieces small enough to fit into the opening at the base of the food hopper. Remove any pits and large stems. The Strainer will remove peelings, cores, seeds, and small stems. Detailed instructions for food preparation are found on p. 4.
2. Place two bowls beneath the strainer; one bowl under the screen to collect the sauce, pulp or juice, and the other bowl under the spout to collect the waste (see image at right).
3. Fill the food hopper half full. Use the food pusher to **gently guide** the food into the body as you turn the handle clockwise. **Do not force** the produce into the strainer. This can cause the spiral to jam and liquid to squirt out of the strainer.
4. When processing has been completed, remove the squirt guard and use a spatula to scrape the remaining food pulp from the screen. Discard the waste peelings, cores, seeds, etc.

5. The strained food should be used immediately or preserved through canning, freezing, or dehydrating. To be assured of safety and quality in preserved foods, always use recipes from reliable home canning guides. For more information visit our website, [www.Victorio.info](http://www.Victorio.info).

## Helpful Hints

1. The Strainer operates easily when fruits and vegetables are in the spiral, but difficult to turn when empty. Do not turn the handle when the Strainer is empty, as that will damage the screen and spiral.
2. When straining certain foods, it is normal for some pulp to empty with the waste. The waste can be strained again to retrieve more pulp.
3. The squirt guard may be removed, if necessary, when processing drier foods, such as beans or potatoes.
4. If the Strainer handle becomes difficult to operate, turn the handle counter-clockwise a few complete rotations. This will help clear any obstructions and allow the Strainer to operate normally. If the handle is still hard to turn at this point, you will need to disassemble the Strainer and remove any obstructions in the screen and spiral.

## Accessories

Your Victorio Food Strainer comes with:

- Apple/Tomato Screen
- Standard Spiral

## Optional Screens & Spirals

Each item below is available separately or all together as a **4-Piece Accessory Kit (VKP250-5)**. You can visit our website, [www.Victorio.info](http://www.Victorio.info), for more information or to purchase replacement parts and accessories.

**VKP250-1: Berry Screen (Very Fine)** has the finest holes of all the screens for removing small seeds in raspberries, strawberries, blueberries, etc. Ideal for making jams, jellies, and pie filling.

**VKP250-2: Pumpkin Screen (Coarse)** has slightly larger holes than the Apple/Tomato screen. It is for processing pumpkin, squash, and potatoes.

**VKP250-3: Salsa Screen (Extra Coarse)** is a very coarse screen for processing salsa and chunkier recipes. It has the largest holes of all the screens.

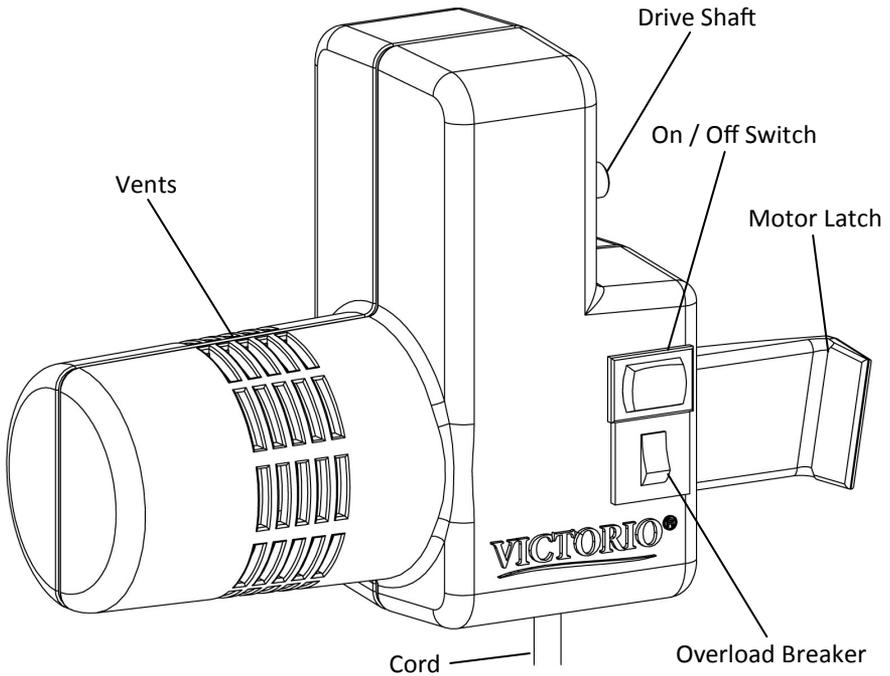

**VKP250-4: Grape Spiral (Short Spiral)** is used to process grapes or any produce that contain large seeds and thicker skins. Its shorter length helps prevent the strainer from jamming, or becoming too difficult to turn, by allowing the seeds and skins to exit the end of the screen sooner. For best results, use the Grape Spiral inside the Apple/Tomato Screen.

## TROUBLESHOOTING GUIDE

PROBLEM	SOLUTION
It is hard to turn the handle when the strainer is empty or dry.	<b><u>DO NOT crank the handle while the food strainer is dry!</u></b> Doing so will damage the screen and spiral. It is hard to turn because it is empty. Once food is placed in the hopper and you begin the straining process, the handle will become easier to turn.
The strainer has become stuck or jammed and is very hard to crank or cannot be cranked at all.	Crank the handle several times in reverse, then turn it forward again slowly. Do this a few times and if the jam is not cleared the strainer will need to be disassembled and cleaned out.  If you are straining grapes, berries or produce with large seeds and thicker skins, see p. 8 for the Grape Spiral Accessory, under “Optional Screens and Spirals.”
The seeds and skins coming out of the waste funnel are very wet and still contain juice or pulp.	Review the “Assembly Instructions,” on p. 6, and be sure the strainer is properly assembled. Run the waste through again to retrieve the maximum amount of pulp. Do not add too much all at once to avoid jamming the strainer.
The juice is backing up into the hopper and not going down through the screen	This will happen when the screen gets clogged with pulp. Remove the squirt guard and scrape the pulp off the outside of the screen with a rubber scraper.
The skins and seeds are getting into the sauce.	Review the “Assembly Instructions,” on p. 6, and be sure the strainer is properly assembled. Small bits of skin or seeds may get through the holes in the screen when using a coarser screen. If this is a problem, try using a finer screen.

# VICTORIO FOOD STRAINER MOTOR VKP250-M (optional)

\*The electric motor is an optional accessory and is sold separately.

## Features:

- Installs quickly and easy to use.
- Energy efficient and durable.
- High torque power combined with all metal gears provide years of reliable service.
- Very low power consumption (60 Watts max) keeps your power bill low and allows for worry free use with backup emergency power such as generators or a battery powered electrical inverter.
- Motor specifications: 120 VAC, 60Hz, 60 watts.

## **IMPORTANT SAFETY INSTRUCTIONS**

**WARNING! - Failure to follow these safety instructions correctly will lead to a risk of fire, electric shock or personal injury.**

### **SAVE THESE INSTRUCTIONS**

When using electric appliances, basic precautions should always be followed, including the following:

- **Read and follow all instructions before operating the motor.**
- Connect motor to a properly grounded outlet only (See ‘Grounding Instructions’ on p. 12).
- Do not use electrical outlet adapters with this appliance.
- Do not operate if the cord or plug is damaged, or after the appliance malfunctions, or is dropped or damaged in any way. Return the appliance to the manufacturer for examination, repair, or electrical or mechanical adjustment.
- Do not disassemble. The motor must be serviced by qualified technicians only.
- To disconnect the motor, turn all controls to the off (“O”) position, then remove the plug from the outlet.
- Do not unplug by pulling on the cord. To unplug, grasp the plug, not the cord.
- Do not leave the motor plugged in when not in use and before servicing or cleaning.
- Keep the motor unplugged and make sure the switch is in the off (“O”) position when installing or uninstalling from, the food strainer.
- Never turn on the motor with nothing in the strainer.
- Do not use the motor for frozen foods or fruits with pits.
- To reduce the risk of electric shock, do not immerse the motor in water or other liquid. Do not place or store the motor where it can fall or be pulled into a tub or sink.
- Not for use by or near children.
- Do not contact any moving parts.
- NEVER put hands or foreign objects in the strainer hopper while the motor is installed. ONLY use the food pusher.

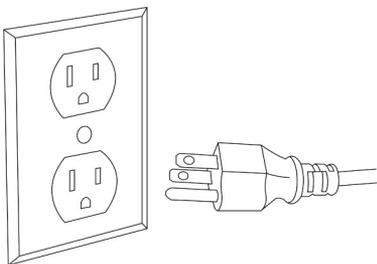

- Never use the strainer without the hopper in place.
- Do not cover the motor ventilation holes.
- Make sure the motor is attached to the food strainer properly before operating (See ‘Installation Instructions’ on p. 15).
- Only use electric motor (model VKP250-M) with Victorio Food Strainer (model VKP250).
- Do not use outdoors.
- This appliance is for household use only.

**GROUNDING INSTRUCTIONS** - (See diagrams below)

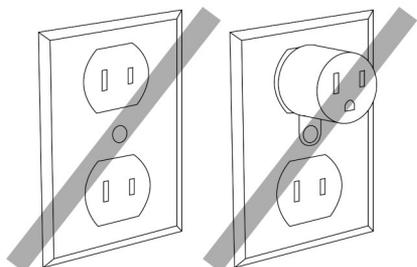

**THIS APPLIANCE MUST BE GROUNDED.** In the event of malfunction or breakdown, grounding provides a path of least resistance for electric current to reduce the risk of electric shock. This appliance is equipped with a cord having an equipment-grounding conductor and a grounding plug. The plug must be plugged into an appropriate outlet that is properly installed and grounded in accordance with all local codes and ordinances.

**DANGER** – Improper connection of the equipment-grounding conductor can result in a risk of electric shock. The conductor with insulation having an outer surface that is green with or without yellow stripes is the equipment-grounding conductor. If repair or replacement of the cord or plug is necessary, do not connect the equipment-grounding conductor to a live terminal. Check with a qualified electrician or serviceman if the grounding instructions are not completely understood, or if in doubt as to whether the appliance is properly grounded. Do not modify the plug provided with the appliance – if it will not fit the outlet, have a proper outlet installed by a qualified electrician.

**Correct**

**Incorrect**

## Circuit Breaker Instructions:

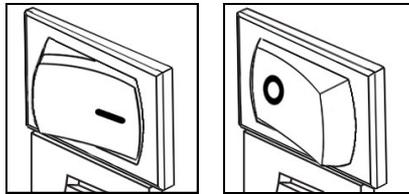

The motor includes a resettable overload breaker to prevent risk of personal injury or food strainer damage.

**Instructions for resetting overload breaker:** Turn the switch to the off (“O”) position and unplug the motor from the outlet. Remove the motor from the food strainer. Wait 10 minutes for the motor to cool, then manually reset the breaker by pressing in on the top of the breaker until it locks.

**Important:** Before reinstalling the motor, check the food strainer operation by installing the handle and manually operating the food strainer to make sure the spiral isn’t jammed or overly hard to turn. If the food strainer becomes jammed, please refer to Helpful Hint #4, on p. 8.

**Caution:** If the breaker trips immediately after plugging in or turning on the motor, do not bypass the breaker and do not use the motor. Contact Victorio customer service at 866-257-4741.

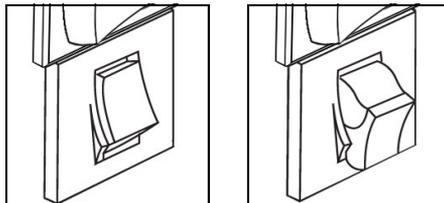

### Power Switch

ON

OFF

### Overload Breaker

Breaker in normal  
operating position

Breaker that has  
been tripped

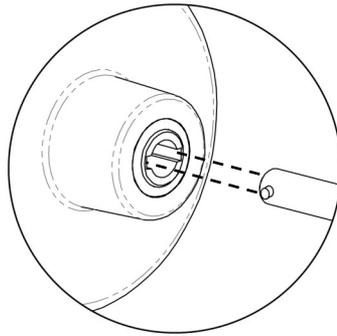

Motor specifications: 120 VAC, 60Hz, 60 watts.

## Motor Use Instructions

**Make sure you have read the Important Safety Instructions on p. 12 before installing the motor.**

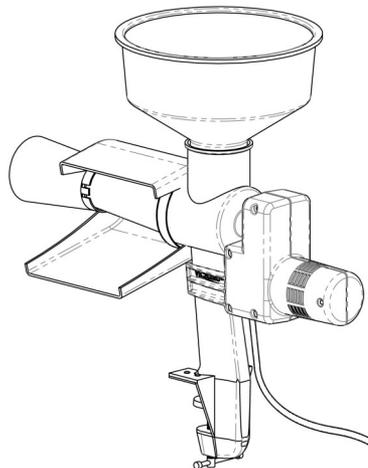

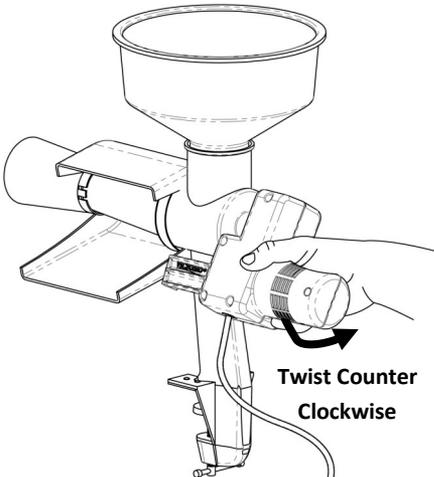

### **Installation Steps:**

1. Remove the motor from the packaging and make sure the power switch is in the off (“O”) position (see diagram on p. 13) and the motor is unplugged.
2. Use the crank handle to position the strainer shaft so the motor shaft can fit in (see diagram below).

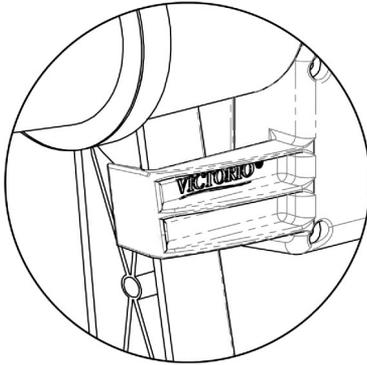

**Shaft notches  
should line up  
with pins.**

3. Once the shaft is positioned correctly, insert the motor shaft into the food strainer shaft by pushing forward on the motor.
4. With the shafts connected, twist the motor counter-clockwise (see diagrams below).

5. You will know the motor is correctly in place when the motor latch is secure around the strainer body (see diagram below).

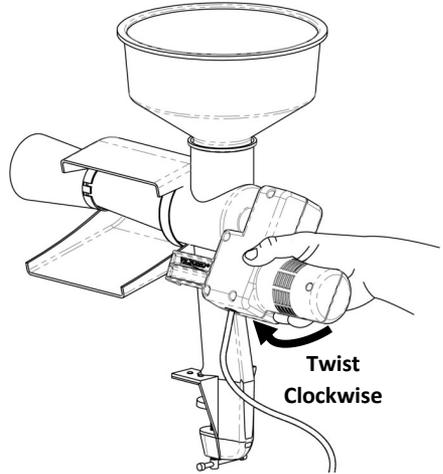

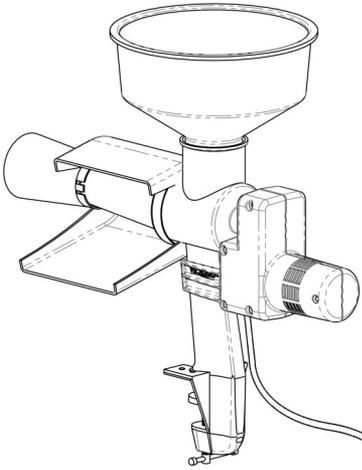

**Make sure the motor latch is secured to the food strainer before operating the motor!**

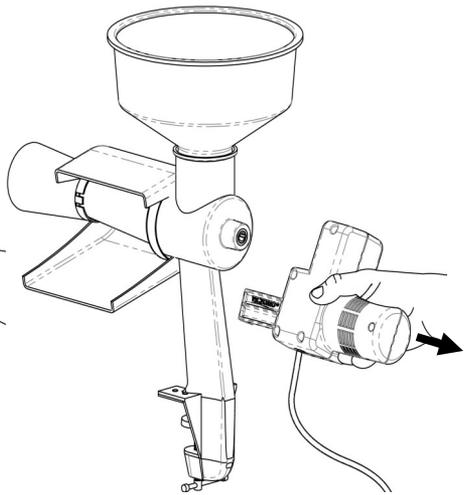

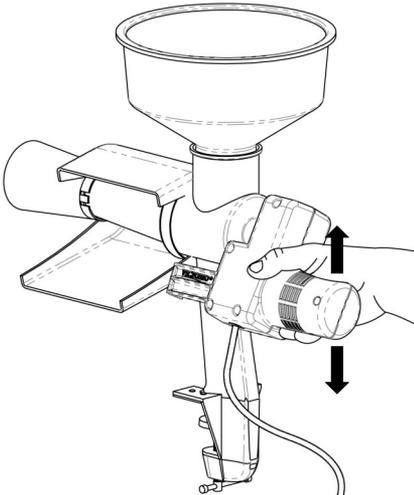

6. Make sure the power switch is still in the off (“O”) position and plug the motor cord into a correct power source (see diagram on p. 13).
7. **WARNING! - Do not turn on the motor at this point! You will damage your strainer by running it when the screen and spiral are dry.**
8. Now that the motor is connected properly and plugged in, you can put your prepared produce (see p. 5 for specific fruit preparation instructions) into the hopper. If needed, review the Strainer Use Instructions on p. 4 before you begin the straining process.
9. You may now turn the power switch to the on (“I”) position. **Never use any tool except the food pusher in the hopper. Keep hands, hair, clothing and any other objects, except the pusher, away from the hopper opening at all times.**

## Removal Steps:

1. To remove the motor, make sure the power switch is in the off ("O") position and the cord is no longer in the outlet.

2. Firmly grasp the motor and twist in a clockwise direction to release the motor latch from the body of the strainer. (See diagram above).
3. The motor may be tight and hard to remove. If so, rock it up and down gently as you pull straight back. (See diagram below).

4. To store, place the motor back in its original box and packaging and keep it in a cool, dry place, away from moisture and extreme temperatures.

## TROUBLESHOOTING GUIDE

PROBLEM	SOLUTION
I cannot attach the motor.	Review p. 14 on how to attach the motor, including how to correctly align the motor shaft with the food strainer shaft.
I cannot remove the motor.	Review the diagram on p. 16 and read how to remove the motor. Sometimes the motor shaft can get stuck or be difficult to remove.
The motor does not turn on.	Review the instructions and diagram on p. 13 about the Power Switch and the Overload Breaker.
The motor does not turn on and the overload switch is not tripped.	Make sure the cord is plugged into a live power outlet. Review the diagram on p. 13 about the Power Switch. Make sure the switch on motor matches the diagram on that page for the on, (“I”) position.

## **Product Warranty**

Model VKP250 - Food Strainer Warranty: 1 year

Model VKP250-M - Optional Motor Warranty: 1 year

We are confident in the quality of our products and back up each one with a limited warranty for the length of time specified above. Should you experience any problems with your product, please contact our customer service department.

All warranty claims must be accompanied by a proof of purchase and are only valid if the appliance has been operated within the U.S. or Canada and used for its intended purposes. These products are for household use only.

### **Items Not Covered:**

- Return shipping costs or returned items lost in transit.
- Damages to the product due to accident, misuse, abuse, negligence, or if the appliance has been altered in any way.
- Products used outside of the United States or Canada.
